

QuickConnect Deck Plate

The QuickConnect deck plate system keeps your pool deck free from cables and makes set up quick and easy. The QuickConnect deck plate provides integrated support for our speedlight technology.

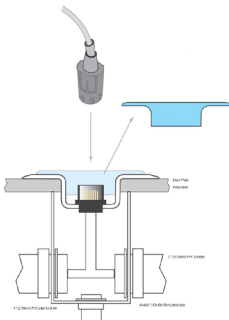

Connection hub under the starting block

This connection hub is placed under the block and replaces the traditional deck plate as the place where all of the timing components plug in.

- Relay judging platform
- Speedlights
- 3 backup buttons for judges
- Touchpad
- Individual lane speaker

All components, including connection hubs, speakers, and relay judging platforms are removable for dry, safe storage during non-practice / non-meet times.

Deck plate connector

A military connector with gold-plated connections is mounted in the pool deck. One short cable runs from this deck plate to the connection hub (DP-4.5QC) under the starting block. This system provides greater convenience and less possibility of corrosion from pool chemicals and water. The connector is covered when not in use to prevent corrosive build-up.
